

Project no. GOCE-CT-2003-505539

Project acronym: ENSEMBLES

Project title: ENSEMBLE-based Predictions of Climate Changes and their Impacts

Instrument: Integrated Project

Thematic Priority: Global Change and Ecosystems

D8.7

“Cross-cutting publication in peer-reviewed book series”

Due date of deliverable: postponed to Month 48

Actual submission date: 1 February 2008

Start date of project: 1 September 2004

Duration: 60 Months

Organisation name of lead contractor for this deliverable: UNIGENEVA

Revision [Final]

Project co-funded by the European Commission within the Sixth Framework Programme (2002-2006)		
Dissemination Level		
PU	Public	X
PP	Restricted to other programme participants (including the Commission Services)	
RE	Restricted to a group specified by the consortium (including the Commission Services)	
CO	Confidential, only for members of the Consortium (including the Commission Services)	

Advances in Global Change Research 30

Seasonal Forecasts, Climatic Change and Human Health
Health and Climate

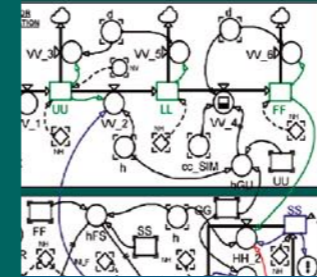

Awareness that many key aspects of public health are strongly influenced by climate is growing dramatically, driven by new research and experience and fears of climate change and the research needed to underpin policy developments in area is growing rapidly. This awareness has yet to translate into a practical use of climate knowledge by health policy-makers. Evidence based policy and practice is the mantra of the health sector. If climate scientists are to contribute effectively to health policy at local and global scales then careful empirical studies must be undertaken – focused on the needs of the public health policy and decision-makers.

Results presented at the Wengen conference make clear that the science and art of integrating climate knowledge into the control of climate sensitive diseases on a year to year time frame as well as careful assessments of the potential impacts of climate change on health outcomes over longer time frames is advancing rapidly on many fronts. This includes advances in the empirical understanding of mechanisms, methodologies for modeling future impacts, new partnership developments between the health and climate community along with access to relevant data resources, and education and training. In a rapidly evolving field this book provides a snapshot of these emerging themes.

Note: Chapters 1 to 6, 9 and 11 of this book contain ENSEMBLES results.

Contents

Acknowledgements	ix
Contributors	xi
Part I	
Seasonal Climate Forecasting for Health	1
Stephen J. Connor, Madeleine C. Thomson, and Bettina Menne	
Chapter 1	
The Impact on Human Health of Climate and Climate Change: Research in the ENSEMBLES Project from Seasonal to Centennial Timescales.	5
Chris D. Hewitt	
Chapter 2	
“Flowering Walnuts in the Wood” and Other Bases for Seasonal Climate Forecasting	13
Simon J. Mason	
Chapter 3	
Climate and Infectious Diseases.	31
Louise Kelly-Hope and Madeleine C. Thomson	
Chapter 4	
Integration of Seasonal Forecasts into Early Warning Systems for Climate-Sensitive Diseases such as Malaria and Dengue.	71
Stephen J. Connor and Gilma C. Mantilla	
Chapter 5	
Climate and Environmental Information and the Control of Epidemic Meningitis in Africa.	85
Luis E. Cuevas, C. Anthony Hart, and Madeleine C. Thomson	
Chapter 6	
A Multimodel Framework in Support of Malaria Surveillance and Control	101
Daniel Ruiz, Stephen J. Connor, and Madeleine C. Thomson	

	Recent Developments and Next Steps in Seasonal Forecasting and Health	127
	Madeleine C. Thomson, Stephen J. Connor, and Bettina Menne	
Part II	Climate Change and Health	131
	Martin Beniston and Ricardo García-Herrera	
Chapter 7	The RedGems Information System: Climate, Environment and Public Health	135
	Yves M. Tourre, Jean P. Lacaux, Antonio Güell, M. LaFaye, Philippe Sabatier, Eliane Coëffier, and Laurent Braak	
Chapter 8	Impacts of Heat and Ozone on Mortality Risk in the New York City Metropolitan Region Under a Changing Climate	143
	Kim Knowlton, Christian Hogrefe, Barry Lynn, Cynthia Rosenzweig, Joyce Rosenthal, and Patrick L. Kinney	
Chapter 9	Physiological Equivalent Temperature as Indicator for Impacts of Climate Change on Thermal Comfort of Humans	161
	Andreas Matzarakis and Bas Amelung	
Chapter 10	Weather, Ambient Air Pollution and Bronchial Asthma in Athens, Greece	173
	Panagiotis Th. Nastos	
Chapter 11	Outreach from the IAI Collaborative Research Network on Climate Variability and Human Health Impacts in the Tropical Americas	189
	Joan L. Aron	
	Recent Developments and Next Steps in Climate Change and Health	203
	Patrick L. Kinney and Ricardo García-Herrera
